# **Brake Controller**

**2 and 4 wheel 12 volt unit**

**CM710**

## **WIRING CONFIGURATION**

White Wire	Earth negative
Blue Wire	To trailer brakes
Red Wire	To normally open contact on brake light switch
Black Wire	To positive side of battery through a 20 amp fuse

## **WARNING:**

**Incorrect wiring will cause the diode to instantly Open Circuit, voiding Warranty.**

## **INSTALLATION INSTRUCTIONS**

1. Connect white wire to earth.
2. Extend blue wire to electric brake magnets
3. Run red wire to normally open contact on brake light switch
4. Run a black 4mm wire from the positive side of the battery through a 20 amp fuse to the black wire of the control unit
5. Mount the bracket keeping the control unit a minimum of 5mm from other surfaces
6. When testing the unit, it must be under a resistive load to vary the voltage

NOTE: LED is activated only when brake is operated.
